4] Biological Importance of Carbohydrates

- * They have wide range of functions providing significant function of the dietary food
- * Instant source of energy
- * Acting as a storage form of energy source in the body serving as a well as membrane component that mediates some forms of the intracellular organism
- * It helps in the digest the food molecule that our body can use.

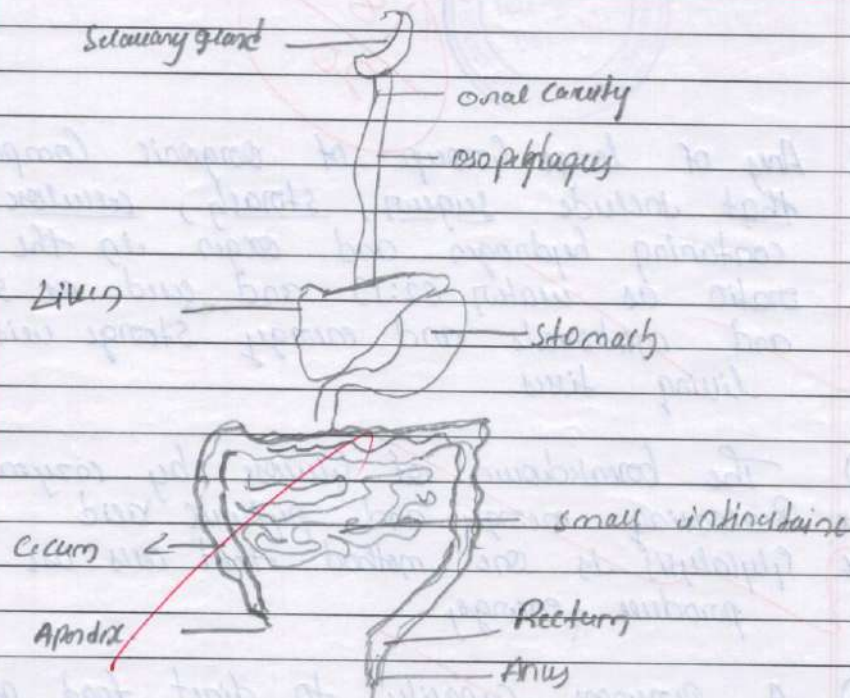

5] pigments present as Haemoglobin iron constituent present in Red blood cells

Ques 9] Transport of Oxygen & Carbon dioxide in Blood.

- * O_2 bind the with the haemoglobin respiratory system reversible
- * Transport of CO_2 is carried by the haemoglobin as Carbonyl-haemoglobin
- * This binding is related to partial pressure of CO_2
- * When CO_2 is high in O_2 is low as in the tissue more binding of CO_2 occurs where as when p_{CO_2} is low & p_{CO_2} is high as in the artery dissolution CO_2 form Carbonyl-haemoglobin takes place

DNA Polymerase are the Enzymes & create DNA molecules by assembling nucleotides. these essential to DNA replication & usually work in pairs to create two identical DNA from a single molecule.

in the process of replication of DNA repeated many times the segment of DNA can be amplified to approximately billion times i.e.

* Such repeated amplification is achieved by the use of thermostable DNA Polymerase

* The amplified fragment if desired can now be used to ligate with vector & further cloning.

1. Thermostable DNA Polymerase is also called Taq Polymerase.

once the body have generated the antibody to a hapten carrier adduct with a small molecule hapten may also be able to bind to the empty body but will usually not initiate an immune response.

In most of cases this can only be elicited by the only hapten carrier adduct. Sometimes the small molecule hapten can block immune responses to the complete antigen by preventing the adduct from binding to the antibody + a process called hapten inhibition.

* The hapten acts as a epitope for the antigen which binds to the antibodies without causing a response.

if the most int. haptens these will not be in the antibodies left to bind to complete antigen thus inhibiting the antibody response.

Haptens : haptens are incomplete antigens that do not cause an immune response upon binding because they cannot bind to MHC complexes.

(*) The transport of sperm from the testes and the which produces of sperm and the sperm of the undifferentiated from the the reproductive organs of the male are released and the system is very fast and the male reproductive system the testes which are include the hormones estrogen and progesterone and the accessory glands all the sperm and it produced are testes in sperm and stay developing and the transport of the sperm in the and transportation of the sperm are started and transported to the sperm to the glands

⑥ Ovulations :- the process of the secretion of the ova from the ovaries and the development of the ovarian follicles are called as the ovulations.

⑦ Accessory glands of the male reproductive system :- Estrogen, prolactin and etc. sperms and testes are the male reproductive system.

① seminal vesicle
prostate glands
Bullourethral glands

⑧ male reproductive system

Male reproductive system secretes the hormones that are gonadal hormones which contains the prolactin, estrogen and the which is secreted by LH. Luteinizing hormones are also secreted by the male reproductive system.

In the male reproductive system the sperm counts are the 4000 to 5000 mm and

⑨ The length of the length of the male sperm of man is 4-5 cm height and the width of the male reproductive system is the 2-3 cm width.

Ans (2)

- ↳ Mulberry
- ↳ Oak Tassar and tropical Tassar.
- ↳ Muga
- ↳ Eri.

Ans (3) Most cultivated species of mulberry in India belong to *M. Indica* or *M. alba*.

It withstood many a daunting challenges from other natural and artificial fibres and yet, remained the Queen of the textile & vibrant colours, high absorbance, lighter weight, resilience and excellent drape etc.... have made silk, the preeminent and inevitable companion of the elite, all over the world.

Ans (3)

Rearing technology of silkworm;

In the beginning, the female silk moth lays hundreds of eggs. These eggs are stored over clean papers or a piece of cloth. These eggs are then sold to the silkworm farmers. The farmers then keep the eggs under the accurate temperature & humidity in a clean place.

Rearing of mulberry silkworm;
Rearing house :-

Constructing rearing house & an elevated & shaded

Types ;

Incubation and sowing.

- ↳ spread the eggs in one layer on a paraffin paper.
- ↳ cover egg & paraffin paper.

Chambers sowing technology :-

- ↳ Distribute the worms uniformly in trays.
- ↳ provide 7-11 time feeding.

late age of sowing.

- ↳ use ~~multisowing~~ leaf only from 60 days old plantation.
- ↳ provide cross ventilation.
- ↳ provide correct bed spacing and feed adequately.

↳ care during moulting.

Stop feeding when 90% worms & enter into the moult.

↳ Moulting and harvesting.

Pick fully ripe worms for moulting mount in suitable mountages like rotary or bamboo mountages.

↳ Hygiene ;

wash hand with a disinfectant prior to the entry of sowing house & avoid entry of other than those sown.

chemically speaking, silk is made of proteins secreted in the fluid state by a caterpillar, popularly known as "silkworm."

These silkworms feed on the selected food plants and spin cocoons as a protective shell, to perpetuate the life.

Silkworm has 4 stages in its life cycle viz. egg, caterpillar, pupa and moth.

This life cycle at the cocoon stage to obtain the silk, a continuous filament & commercial importance used in various

Insect & vectors:-

Q No I.

- 1) Reservoirs:- It is usually living host of certain species such as an animal or plant inside of which pathogen survives after without causing disease for the reservoir itself.
- 2) Examples of insect order
i) Hemiptera ii) Homoptera iii) Diptera iv) Coleoptera.
- 3) Fly broncae disease are:-
cholera, antra, typhoid, fever dysentery
- 4) Disease caused by bugs are:-
Malaria, yellow fever, Zika, dengue.
- 5) Two mosquito broncae disease, are
Zika virus, nile virus, west nile virus
dengue & malaria.

Q No II.

2) Control of House flies:-

Mechanical control:-

This includes anything that kills or captures flies without the use of chemicals some examples are follows.

- * fly swatters these only work well when your dealing with small numbers of flies.

Place these materials in garbage bags & tie the bags securely. remove all food residues and clean your garbage can weekly

Another cultural method is to keep housefly out of homes and businesses by

- * Keeping windows screened & doors closed
- * Placing exhaust (blower) systems above doors
- * installing doors that open and close mechanically.

(2) Note on order hemiptera:-

order:- Hemiptera

Phylum:- Arthropoda

class:- insecta.

kingdom:- Animalia.

* Hemiptera known as true bugs is very large & diverse order.

* They are found all over the world there are 8000 described species in 37 families

* Hemiptera are also important in agricultures known to cause direct damage to plants.

* These are piercing sucking mouth parts.

* sticky fly papers or ribbons with order attract will trap flies.

* you can use bait traps with sugar, meat, fruit or molasses. Pre baited traps tend to use Pheromones.

* UV light traps work well but they must be placed properly. It needs to be put no more than 8ft off the ground and away from any competing light sources of food preparation areas. Also make sure it can't be seen from the outside as it could attract more flies in.

Biological Controls:-

* Parasitic wasps & fire ants suppress housefly populations naturally. If you want to use this form of natural pest control you can order fly pupae from insectaries in Texas or across the United States.

* The pupae which are already infected with the parasites to the can be spread around homes or near where houseflies are developing. Place the pupae in areas out of direct sunlight where they will not be stepped on.

Cultural Controls:-

Cultural control means changing the environment to prevent houseflies from developing. The best cultural method is to properly dispose of any organic matter such as vegetable or other food by-products.
