Subject : Permission to visit Water Purification Unit, Sindagi
Ref No: As per Rani Channamma University Syllabus, Belagavi

Respected sir

We the faculty of department of Botany along with BSc I semester students kindly request you to give the permission to visit the water purification unit at Sindagi on 13/12/22 for Practical experimental demonstrations and field observations as it is made compulsory according to Rani Channamma University syllabus . Therefore, we kindly request you to give permission to visit. Hope the authority will consider and oblige.

Thanking you.

POND WATER PURIFICATION

Title : One Day field visit to pond water purification Vidya nagar Sindagi. 13-12-2022

Introduction :-

Objectives : To aware all the botany Students about pond water purification practical knowledge.

Main Content :- As a part of Botany Curriculum And Department activity was department arranged one day study pond water purification in Vidya Nagar Sindagi. Tq Sindagi Dist -Vjayapur we and our teachers **Shailaja and Jyoti Medam** are selected this spot for our study of practical knowledge. The water utilized for drinking as well as irrigation **A.J.R Natikar Junior Engineering And Ajad Malad** are Explain in the pond water purification method.

The Student Of B.sc 1st Sem were activity participated in the Study tour all the students were taken the advantage of this curriculum based study tour all the students observed in the pond water purification method.

Municipal Water Treatment Processes

CONVENTIONAL SURFACE WATER TREATMENT

Conventional surface water treatment plants are still being used throughout the United States. They typically consist of several steps in the treatment process. These include: (1) Collection ; (2) Screening and Straining ; (3) Chemical Addition ; (4) Coagulation and Flocculation ; (5) Sedimentation and Clarification ; (6) Filtration ; (7) Disinfection ; (8) Storage ; (9) and finally Distribution.

Let's examine these steps in more detail.

Collection – The source water for a municipal surface water treatment plant is typically a local river, lake, or reservoir. There must be a method to get this water to the water treatment plant. Quite often, a series of pumps and pipelines transport the water to the treatment plant. Sometimes, as is the case of San Angelo, water from a reservoir such as Twin Buttes can be transported to the water treatment plant via a river. Twin Buttes Reservoir is one of the water sources for San Angelo. The water is released into Lake Nasworthy where it is transported down the Concho River to the water treatment plant

At the water plant, large pumps are used to transfer the water up to the treatment facility. Treatment facilities are often engineered to utilize gravity water flow as much as possible to reduce pumping costs.

Many water treatment plants utilize water from more than one source. Blending groundwater with surface water is a method often used to improve the quality of the final product.

Screening and Straining – If you think about surface water sources, i.e., lakes, rivers, and reservoirs, you realize they contain varying amounts of suspended and dissolved materials. This material may include turbidity, color, taste, odor, microorganisms, fish, plants, trees, trash, etc. The material may be organic or inorganic, suspended or dissolved, inert or biologically active, and vary in size from colloidal to a tree trunk. Some of these larger items can impede equipment in the treatment process, such as a tree limb getting stuck in a water pump impeller. So the first process in conventional water treatment is to screen or strain out the larger items.

This is often accomplished using a large metal screen, often called a bar- screen, which is placed in front of the water source intake. Large items are trapped on the screen as the water passes through it. These screens must routinely be raked or cleaned off.

Chemical Addition – Once the pre-screened source water is received into the treatment plant, chemicals are added to help make the suspended particles that are floating in the water clump together to form a heavier and larger gelatinous particle, often called floc. In this process, a chemical is added that reacts with the natural alkalinity in solution to form an insoluble precipitate. There are many different chemicals on the market that are used in this process. These chemicals are called *coagulants*. One of the most common that has been used for many years is aluminum sulfate, or alum. Some other very

popular coagulants are ferrous sulfate, ferric chloride, sodium aluminate, activated silica, and compounds called polymers that are manufactured chemicals made up of repeated small units of low molecular weight combined into molecules with very large molecular weights. These polymers are classified as cationic polymers (positively charged), anionic polymers (negatively charged), and nonionic polymers (neutrally charged). Regardless of which coagulant or combination of coagulants is used, they must be mixed very well with the water before they can form a heavier floc.

Coagulation and Flocculation - A rapid mix unit is usually used where the coagulant is added to the water to provide a very quick and thorough mixing. The water mixing is then slowed to allow the water to come in contact with the forming floc and allow it to increase in size.

SSM

The continued mixing must be gentle to allow the floc to grow and gain weight, but fast enough to keep it in suspension until you are ready for it to settle in the clarifiers. The process of adding a chemical to cause the suspended material to "clump" into larger particles is called flocculation or coagulation. The treatment unit where coagulation and flocculation is performed is called the "flocculator".

Sedimentation and Clarification – Once the flocculation process is complete, the water then passes over the weir in the flocculator and travels to the center of the clarifier, or sedimentation basin. Here, the water makes its way from the center of the clarifier to the saw tooth weir at the perimeter of the unit.

As the water makes its way towards the weir, the large floc particles are allowed to settle out to the bottom of the clarifier. A rake continuously travels across the bottom of the clarifier and scrapes the settled floc to the center of the unit. Pumps are used to pull the settled "sludge" out of the clarifier and send it to a sedimentation / disposal pond. The water that passes over the weir is collected and transferred to the filters. The reason clarification occurs before filtration is so the majority of suspended material can be removed prior to filtration, which avoids overloading the filters and thus allowing much more water to be filtered before the filters must be backwashed.

Filtration – Clarified water enters the filters from the top. Gravity pulls the water down through the filters where it is collected in a drain system at the bottom of the unit. There are many different types of materials (media) used in filters. The most common being sand and gravel. Many conventional plants are now using granular activated carbon as the media of choice because it not only provides excellent mechanical filtration of particulate matter, but also removes organic compounds which can cause taste and odor problems.

Disinfection – Once the water has gone through the filtration process, it is about as clear and clean as it can get. However, there may still be bacteria and viruses remaining. To ensure these are destroyed, there must be a disinfection process employed. The most common disinfection process used in the United States is chlorination. Chlorine comes in many different forms including chlorine gas (most common), chlorine dioxide, hypochlorite (bleach), and others. Whichever method is used, chlorine is added to the water in an amount to ensure all microorganisms are destroyed. Water plants monitor the chlorine levels continuously and very carefully in the treated water. They must add enough chlorine to

[Handwritten signature]

ensure thorough disinfection of the water, but avoid adding excesses that can cause taste and odor problems when delivered to the consumer.

Storage – Once the disinfection process is complete, the water is stored. Storage usually takes place in an underground storage tank called a “clear well”, and also in elevated storage tanks that are visible around town. There must always be an ample supply of water available in the event of emergencies. These can include power outages, fires, floods, etc.

Distribution – So how does the water come out of your kitchen tap? The stored water is pushed through underground pipelines all over town in what is called a “distribution system”. The distribution system consists of large water pumps at the treatment plant, overhead water storage tanks, large pipelines, smaller pipelines, fire hydrants, valves, and water meters in your front yard.

Note: *All of the treatment processes listed above are not necessary used at the San Angelo Water Treatment Plant. This document is meant to give a general description of processes typically used in the treatment of municipal water.*

ಲಿಲಕೆ :-

ಅಗ್ರದಿ ಕಲಹದಲಾ ಭಾರತದಲ್ಲ
ರೈತನು ಈ ದೇಶದ ಬೆನ್ನಿನವನು. ಈತನು
ತನ್ನ ಶ್ರಮ ಮಾತ್ರ ದುಡೆಮಾಡುವ ಸವೆಲ್ಲರ
ತಾಳೆ ವರದಾಪವಾಗಿದ್ದಾನೆ. ಹೀಗಾಗಿ ರೈತ ಈ
ದೇಶದ ಅಸ್ತಿತ್ವವನ್ನು ಎಲ್ಲರೂ ಸ್ವೀಕರಿಸಬೇಕು.

ಹಂತ ಎಂದರೇನು ?

ರೈತನು ತನ್ನ ಹಾಲದಲ್ಲ
ಬೆಳೆದ ಧಾನ್ಯಗಳನ್ನು ರಾಶಿ ಮಾಡುವ ಪದ್ಧತಿ.

ಧಾನ್ಯಗಳನ್ನು ರಾಶಿ ಮಾಡುವ
ಎಂದರೆ "ರೈತ ತನ್ನ ಅತ್ತಿ ಎತ್ತಗಳನ್ನು ಬಳಸಿಕೊಂಡು
ರಾಶಿ ಮಾಡುವ ಪದ್ಧತಿಗೆ ಹಂತ ಎನ್ನುತ್ತಾರೆ."

ಹಂಪಿಯಾ ಉತ್ತರಾತಿ :-

ಹತ್ತಿರ ಕೆನ್ನಣಕೆದ
ಪ್ರಿಹೇಶದಲ್ಲ ಸೊಗ್ಗಿಯಾ ಕಾಲದಲ್ಲ ಹಂತಿ ಹೊದಿಸ
ಜೋಲೆ ಹಾಡುಗೊ. ಕೆಣದ ಮೆದ್ದೆವಲ್ಲ
ನಟ್ಟ ಮೇಟ ಕೆಂಟದ ಸೊತ್ತಲಾ - ಅಸುರೈಲವಾದ
ಹಿತುಲಸತ್ಯದಲ್ಲ ಜೋಲದ ತೆನಗ್ರಪ್ಪ ಕೆರಡ,
ಸಿಂಗಂಜದ ಎತ್ತಿಗೊಂದೆ ಪ್ರೇಮಸ್ಥಿತವಾಗಿ
ಲಗ್ನಸಾಯ ಅಧಾನ್ಯ ಹಂತಿ ಎನ್ನಾತ್ತಿರ.
ಹಂತಿ ಖಂದರ್ ಗ್ರಾ ಮದೆಥಿಲ. ಹಂಪಿಯಾ
ಹಾಡುಗ್ರಸ್ತಾ ಹಾಡುತೆವೆರಾ ಪೊರಾಣಿರಾ ;
ಕೆಂಟು ಕೆಡೆ ಸ್ತ್ರೀಯಾರಾ ಹಾಡುಹೊಂಟು. ಕೃತಲಗ
ಆತ್ತಿ ಸಂಗಾತಿಗೊಂದರ ಎಣ್ಣೆ ಮೊಡುತೆ
ಎತ್ತಿಗೊ.

ಅವು ಅವರಿಗೆ ಹೃದಯವಾಗಿ. ಇಂಥ ಒಂದೊಂದು
ನಿರ್ದೋಷವನ್ನು ಕೊಂಡು ಇಡುವುದು, ಇಂತಹ
ಇಡುವುದು ರಾಜಕೀಯದ ಹೊಣೆಯಾಗಿದೆ. ಮುಂದೆ
ಬರಬರ, ಸರಿಯಾದದ್ದನ್ನು, ಒಂದು ಬರಬರ
ಮಿದು ಎತ್ತಿಟ್ಟು ಕೊಂಡು ಎಷ್ಟು ಇಡ
- ಹೊಣೆಯಾಗಿ ಅವರಿಗೆ ಹೃದಯವಾಗಿ. ಇಂತ
ಇಡುವುದು ನಿರ್ದೋಷವಾಗಿ ಇಡುವ ಕೆಲಸವು
ಗುಣವು ಒಂದೊಂದು ಅವರಿಗೆ ಸರಿ, ಮುಂದೆ,
ಕೆಲಸವು, ನಿರ್ದೋಷವು, ಬರಬರ, ಕೆಲಸವು
ಮಾಡುವ ಕೆಲಸ ಕೊಂಡುಬರುತ್ತದೆ. ಈ ಇಡುವುದು
ನಿರ್ದೋಷವಾಗಿ ನಡೆದಿದ್ದು ಅವರಿಗೆ ಕೆಲಸವು
ಕೊಂಡುಬರುತ್ತದೆ. ಇಂತಹ ಕೆಲಸವು ನಿರ್ದೋಷವಾಗಿ
ಕೊಂಡು, ಮುಂದೆ, ನಿರ್ದೋಷವಾಗಿ, ಬರಬರ,

REPORT ON HANTIYA PADAGALU

The people of the village composed and sang songs in their own words while going about their daily chores and during their leisure time. A song that one man composed and recited, another claimed that the words or songs that emerged from the mouths of all the peoples were sung, and these were thrilling.

Thus, the folk song has maintained its identity since ancient times. A special status has been given to such a folk song. Because of these folk songs, people have introduced the importance of folk song from village to village, city to city, town to town. Thus, folk songs became familiar everywhere.

Hanti words: These are the harvest songs of Bailuseema, stories of Sharans like JatigaraChoudaiya, Kinnari Bommaiya, Madara Chennaiya, MedaraKetaiya, Bija Mahadevi, BedaraKannaiya, KumbaraGundayya etc. and the songs composed by Basavanna on bulls are also sung by the Hanti Pahaduvas in Etha (egg) Kayaka. In between, he sings comedy songs, romantic songs and stories of experience. Savaligesha, the great poet of Hanti's words.

Folk arts are rich in our country so that the whole world looks at our country with amazed eyes. Already recognized folk art is hundreds and abundant. There are thousands of arts yet to be identified. This is why our young people need to worry about this. All folk arts need to be recorded. Apart from the performing arts, there is a vast amount of singing literature.

This is called as sump. it means pit or reservoir serving as drain or receptacle for liquids. Such as cess pool.

This sump is dome shaped structures. These have the capacity of 50000. liters of capacity.

The purified water is stored in the sump for conservation of water.

Sindagi, Karnataka, India

BIOTECHNOLOGY:

The term biotechnology is believed to have been coined in 1917 by a Hungarian engineer Karl Ereky (1878-1952). Ereky is regarded as the father of biotechnology. Thus the term biotechnology has roots into bio (the use of biological process) and technology (to make useful products applying techniques).

- ❖ Biotechnology is defined as the development and utilization of biological processes, forms systems for obtaining maximum benefits to man and other forms of life.
- ❖ Any technological application that uses biological systems, living organisms or derivatives thereof, to make or modify products or processes for specific use.

Objectives of Biotechnology:

- Understanding the importance of immobilized enzymes in pharmaceutical industries.
- Genetic engineering applications in relation to production of pharmaceuticals.
- Importance of monoclonal antibodies in industries.
- Appreciate the use of microorganisms in fermentation technology.
- To develop gene surgery and gene therapy to cure genetic diseases.

SCOPE:

Biotechnology has become one of the most progressive & beneficial scientific fields since last quarter century. The scope of biotechnology are immense in India. We are at a pace of making new application & innovation every day & this could be possible with combining technology & biology together.

There are many organization that offer different job opportunities in India. After doing bachelor degree course & Master degree even also ph.D in biotechnology, one can find jobs in the fields of-

- Drug & pharmaceutical.
- Public funded laboratories.
- Chemicals.
- Energy.
- Waste management.
- Food processing.
- Bio processing
- Government institutions & organizations such as department of biotechnology (DBT)
- Agricultural institutes
- Horticultural institutes.

Educational Trip to Mysore University (Biotechnology Department)

Bachelor of science as a students cant be taught merely in the four walls of the classroom. Only theoretical knowledge is not sufficient to build a competitive young minds. Practical knowledge of the actual things is equally important. Study tour is quite valuable and important aspect to provide practical knowledge to the students of B.Sc.

Study tour emphasizes experimental learning and offer both group and self directed activities, that enable learners to explore various industries cultures, practices and people.

As a part of the curriculum of B.Sc.(Rani Channamma University). A educational trip was organized by the G. P. Porwal College Sindagi.

The major objectives of the trip was to acquaint the students with the instrumentation and process involved in fermentation technology, preservation of microbial cultures and development maintenance and functioning of bioinformatics tools used inn protein analysis and genetic engineering.

So, the trip was planned to visit Department of Biotechnology at Mysore University under the guidance of HOD of botany Prof. S.S.Muttinpendimath madam.And our journey started on 29th of August ,2022, a group of 30 students & 2 satff members were included. Our destination was from Sindagi to Mysore. So, we departed from our college in bus around 5:30pm in the evening. It was one night to Mysore. we had some fun with friends along the journey.

And next day around 6:am in the morning that is on 30/07/22. We reached Adichunchanagiri, where we got freshed up , got

blessings from god and departed to mysore to visit University which was main Aim. We arrived at Mysore University at 12:30pm.

There we had some professional talks and information about our college. And after that we went on to visit biotechnology lab. We entered biotechnology lab 12:42pm.

The lab was huge with all the modern equipments related biotechnology. We are amazed to see such things. There we met Mr.Ravishankar , who was guide knowing all things there.

There we saw many sub-departments. Where some of the scholars working on different projects.

First we met Miss .Anuja and group , who were working on secondary metabolites. There were working on , finding medicines from unexplored plants.

They gave us brief explanation about modern generation antibiotics along with that we also saw many fungal and bacterial culture in the lab which are useful for the studies.

There we had look around huge instruments like laminar airflow, autoclave and modern culturing equipments.

Later we met another team , who were working under the guidance of Mrs.Aruna. There were working on milk protein called colostrum . There one of the team member Mr. suraj explained briefly about what they were working on. Like bioactive effects , bioactive peptides.

He also explained about some of the major equipments used in that lab.

HEAD

V. V. Salimath Sc. Col
SINDGI-586128. College Co

At last we visited a room where actual instruments were located. There Mrs. Ankita who gave us all information about the all instruments one by one all of us very eagerly learnt everything .

And all the professors were very pleased by our behavior and co-ordination.

So after spending four long hours in the lab it was our time to depart, so we thanked all teachers and faculties there.

Next we went onto visit other places in the Mysore like palace , zoo and KRS dam . And had very good time there.

We know that journey are always great with great souls. A memorable time spent with friends and that true learning experience in the University of Mysore. Where we got full satisfaction about the subject and content.

So, finally it was time to depart we left Mysore around 9:00pm at night and reached Sindagi the next morning. So it was totally a memorable trip along with recreation we also acquired a great knowledge.

Conclusion:

The studious attitude and efforts got completed successfully. Thus the G .P . Porwal College Study Tour 2022 came to a full circle as we touched our college campus 6:30am in the morning . There we learnt how important a biotechnology field is and its benefits. And the major role of biotechnology in the development of food crops and medicine, it also joins the hand in over all development of the nation.

Each one of us were tired but contented for sure. As we slept that night we were all rejuvenated and very much ready to welcome dear morning of vivid colours of the sky and grass , the wide deca view of horizons and open the green fields of our college.

NURSERY VISIT

It is ^{true} ~~two~~ that all knowledge required is not printed in books or neither taught in classrooms.

Some of the things are to be learnt from nature itself. So, for this we have to enter into nature and observe actual things.

So as to prove this, a nursery visit was organised by G.P.Porwal V.V.Salimath Science College Sindagi, according to the syllabus of University.

Before visit the place was selected, due to Covid-19 near place was selected it was a village called Babaleshwar which was 15km away from our campus where nursery was present its name was the Babaleshwar Nursery.

According to the information collected the nursery is situated in 40 acrs of land. And it is said that it started before 25 years, and it is famous for its good mangement of plant species. The whole nursery is maintained by RFO officers and large number of laboures.

And the nurserys was well equipped with solar panels for the production of electricity.

Along with this nursery has a huge water pond with water capacity of 4 lakh gallons to maintain the nursery. And it estimated that about 10 lakh rupees have been invested to build the water pond.

Above all it is a very well maintained nursery in vijaypur district. And it is said that there are a Huge no of laboures for watering, cutting and to take care of nursery.

So to accomplish this task, we started our journey on 6/12/2021 around 8:30 am by bus, it was
A short distance journey about 15 km and we reached at 9:30 am.

Before entering the nursery, our sir explained some of the important things about nursery, like what is nursery which place is suitable for nursery about the location along with these sir also briefed about some plants and about their classification. And a quick short information was given about trees, herbs and shrubs and types root, stem and different types of leaf.

So as we enter the nursery our all eyes caught upon the special the aerodrip system used to water plants along with liquid fertilizer and also. Along with our sir we met RFO office as our guide. He said that this special type system is used in Israel country and it was brought from there and We all were pretty excited know this.

And there we saw a tank like object and it was called the sand filter which was connected to a water body from there it filters the impurities and sands water to the drips. And this was very Well explained by our sir, sir also explained that watering of plants depends on the climatic Condition that is more water required in summer and less water in winter seasons.

Next along with our sir we went to study about the different types of plant species and their Classification which was our main aim. So first of all we went around the fruit plants. Above All we called see there a lot of cut and drafted plants over there.

▶ Next along with our sir we went to study about the different types of plant species and their Classification which was our main aim.

So we around fruit plants like -papaya,guava,chickoo,rain tree, sandal wood,tapasi,banyan tree Custard apple,mango,Java.

» After this we went to have ^{look} at poly house and gree house along with that we studied about seed bed also.

► Poly house

-A house or structure made of transparent material such as glass or polyethylene where plants grow under controlled climatic conditions.

► Green house

-A green house is a building where plants such as flowers and vegetables are grown. It usually has glass or translucent plastic roof

► Seed bed

-A seed bed or seedling bed is the local soil environment in which seeds are planted. Here the young plants are grown from seed.

-Types

- 3 types of seed beds are there

-Flat seed bed.

-Raised seed beds.

-Sunken seed beds.

Here we learnt about seed bed in detail and how they are made. Next we moved on to a very attractive plants that is flower plants here we learnt about some of the flower plants which was very well described by sir.

Seed Bed

► Conclusion

-Here we came to the end of the project on the topic nursery visit. I feel we no choice but to Conclude. The nursery visit was a truly a learning experience we learnt a lot of things there beginning from special type of aero drip system to soil composition. Between these we learnt about many plants and their importance and how are they cultivated and taken care. And the grafting techniques and became familiar to many of things we didn't know. Along with these we also got aware by the awareness boards which were put on by nursery that included the advantages of growing plant in nursery. It is said that learning with a good souls always yields a great knowledge, we all friends and Teachers had a great time there. We also thankful to the teachers who helped in completing the Project.

This is the pond water purification unit present in Sindagi vidya Nagar.

Introduction: One of the major purpose of water purification is provide drinking water. water purification also meets the needs of medical, pharmacological, chemical and industrial application for these reason its necessary to clean the water.

The water is filtered by some of methods. by using all these methods we kill the harmful microorganism and make it pure all remove hazardous dissolved gases in water.

The process of purification of water starts with the adding of chemicals such as bleaching powder and Alum to the pond water.

Because it make water disinfectant & chlorine present in bleaching powder solution kills 90% of bacteria present in water.

This is known as an aerator device during water purification process. Aeration is the second step. The treated water is passed to the aeration tank through the pipes. Aeration is an in-line point of entry process that reduces the concentration of volatile organic compounds. Aeration also removes dissolved gases such as hydrogen sulfide, methane, radon. It oxidizes dissolved iron, although the resulting iron particles can foul the packing material in some aeration devices. Through these aeration tanks, water is passed to the clarifiers.

- ⇒ There are three clarifying units are present
- * The each clarifier, works by permitting the heavier and larger particle to settle to the bottom of the clarifier.
 - * The particles then form a bottom layer of sludge requiring regular removal and disposal.
 - * The clarified water then proceeds through several more steps before being sent for storage and use.

All these procedure starts when treated water, (bleaching powder & Alum) is passed to aeration tank and then to the clarifying units. Here water is purified from heavy particles.

The fourth part is filter Bed. This removes Chlorine, chloramine and all of the carcinogenic byproducts. It also removes fluoride which is known to interfere with phosphorus. It also removes the sludge present in it.

FUNARIA

SYSTEMATIC POSITION :-

Division : Bryophyta

Class : Bryopsida

Order : Funariales

Family : Funariaceae

Genus : Funaria

GENERAL CHARACTERISTICS :-

- Moss plant Funaria grows in dense patches or cushions in moist shady and cool places during the rainy seasons.
- It has a height of 3-5 cm, a radial symmetry with a differentiation of an axis or stem, leaves or phylloids and multicellular colorless branched rhizoids
- These are primitive multicellular, autotrophic, shade loving, amphibious plants.
- They reproduce by spore formation.
- They have no vascular system.
- Root like structures called rhizoids are present.
- They show alternation of generation i.e. The gametophytic stage alternates with the sporophytic stage
- **Funaria** is a genus of approximately 210 species of moss and 18 species reported from india.
- Funaria hygrometrica is called "cord moss" because of the twisted seta.
- The name is derived from latin word "funis" meaning a rope.

CONCLUSION :-

Field trip and excursion are important components of a student development. Even we got some benefits and enjoyment and mutual understanding during field visit.

As the trip was for study purpose, we gained the knowledge through environmental things.

The student's efforts got completed successfully. Thus the plant physiology field trip 2019 has come to a full circle as we touched our college campus at about 9:15 pm.

INTRODUCTION :-

A Botanical study comcalletion trip was organized during sept 3-2019 Field trip recognized as important moment in leaming a shared social experlance that provides the opportunity for . student . to cncounter and explore new things in as authentic way

So the in our ,G.P.Porwal Science college as Governed by . Botany department it was volutaryily arranged by studend of CBZ field trip was set to water areas near almatti and koodalasangam .

We gathere in our compus at around 6:30 am Started from the college at 9:00 am with the guidance and compny of our professor: . S, B Goudappa gouda Sir and prof:- S, S muttinpendimath madem we reached our first destination devar hipparagi mallayya tempe .

ALGAE

Visited Place : Mallayya temple Devarhipparagi

GENERAL CHARACTERISTICS :-

- Algal cells are eucaryotic
- Study of algae is called Phycology
- Cell wall is thin and rigid
- Motile algae such as euglena have flexible cell membrane called periplasts
- Cell walls of many algae are surrounded by a flexible gelatinous outer matrix
- A discrete nucleus is present
- Inclusions like starch granules, oil droplets and Vacuoles are present
- Chlorophyll and other pigments are present
- Chloroplasts may occur one, two or many per cell they may be ribbon like , bar like , Net like, or as discrete discs

NOSTOC

CLASSIFICATION OF NOSTOC :-

DOMAIN -Bacteria

PHYLUM- Cyanobacteria

ORDER - Nostocales

FAMILY- Nostacaceae

GENUS - Nostoc

GENERAL CHARACTERISTICS :-

- It is blue green algae of filamentous form.
- Nostoc consists of many slender long & short inter woven filaments which look like a chain of beads.
- Each filaments is unbranched & consists of row of rounded or oval cells.
- There is a often a gelatinous sheath covering each filament is known as mucilagenous sheath.
- Each cell is differentiated into two regions called **chromoplasm**(the outer region is blue green poigmented) & the inner colourless region called **centroplasm**.

CYCAS

Systematic Position:-

Division – cycadophyta

Class – Cycadopsida

Order – Cycadales

Family – Cycadaceae

Genus – Cycas

GENERAL CHARACTERISTICS :-

- **Cycas** is the most widely distributed genus of the order Cycadales . there are about 20 species which occurs in wild state in china, japan, Australia, Africa , Burma and India .
- Four species of cycas -*C. circinalis* , *C. pectinata* , *C. rumphii* and *C. beddomei* – occurs in natural state in india , chiefly in Assam , Orissa , Meghalya , Andaman and Nicobar Islands , karnatak and tamil Nandu .*C. revoluta* and *C. siamensis* are widely grown in gardens .
- The members of this order are commonly known as cycads . they originated from the seed ferns . i.e., cycadofilicales , towards the end of carboniferous periods and formed a dominant vegetation during the Triassic periods of Mesozoic era.
- The order includes eleven living genera and about 100 species. They are usually woody trees except *Zamia pygmaea*.
- The stem is mostly unbranched and is covered by persistent leaf bases. The leaves are arranged in whorls at the apex of the stem; they are pinnately compound
- The wood is monoxyle. The micro- and megasporophylls usually from male and female strobili

REPORT :-

Gour Banjaras have different cultural life and practices that differentiate them from others. They also have their own language, food habits, body tattooing, dress and ornaments, art, Martial art, Gorilla fighting skill, 'Ghumar' dance, and festivals and ceremonies, which have formed their culture. Gor Banjara culture includes their language, costume, marriage customs, festivities, folk and performing arts, and many other capabilities acquired by them. Women are known to wear colorful and beautiful costumes like phetiya (as ghagra) and kanchalli (as top) and have **tattoos** on their hands. The dress is considered fancy and attractive by Western cultures. They use mirror chips and often coins to decorate it. Women put on thick bangles on their arms (patli). Their ornaments are made up of silver rings, coins, chain and hair pleats are tied together at the end by chotla.

I visited to meet Banjara folk singer in Rampur Tanda (Karnataka) her name is Smt. Kashibai and Hunkabai. They have different style to sing a Banjara folk songs. They have well looked outfits like above mentioned matters. I learned about one of the different culture and tradition of India. Music and dance are integral parts of the Banjara culture. Their folk songs and dances depict tales of love, nature, and rural life. The Ghoomar dance of Rajasthan and Lambadi dance of Karnataka are famous examples of their captivating performances.
